I. EXECUTIVE SUMMARY	1
Background	1
Process	1
Plan Summary	2
Conclusion	7
II. INTRODUCTION	8
A. Purpose	8
B. Goals of the CCP	9
C. Plan Duration	10
D. Adaptive Management	10
<u>Background</u>	10
<u>Benefits of Adaptive Management</u>	11
<u>Difficulties in Adaptive Management</u>	11
<u>Adaptive Management and the CCP</u>	12
E. Mechanics of the CCP	13
<u>Process</u>	13
<u>Plan Organization</u>	15
<u>How to Use this Plan</u>	18
<u>Implementation and Prioritization</u>	18
<u>Public Participation Process</u>	18
<u>Information and Data Sources</u>	19
<u>Scientific Assessment and Review</u>	20
F. Socio-economic Considerations	20
G. Management and Legal Authorities	21
<u>Colorado Division of Wildlife</u>	21
<u>Colorado Oil and Gas Conservation Commission</u>	22
<u>Colorado State Land Board</u>	22
<u>Counties</u>	23
<u>Bureau of Land Management</u>	24
<u>National Park Service</u>	25
<u>Natural Resources Conservation Service</u>	26
<u>United States Forest Service</u>	26
<u>United States Fish and Wildlife Service</u>	27
<u>USFWS National Wildlife Refuge System</u>	27
<u>Memoranda of Understanding</u>	28
H. PECE Standards	28
III. CONSERVATION ASSESSMENT	30
A. Biology and Life History	30
<u>Species Description</u>	30
<u>Food Habits</u>	30

<u>Life History and Movements</u>	32
<u>Breeding</u>	32
<u>Nesting</u>	33
<u>Survival</u>	34
<u>Movements</u>	34
<u>Habitat Requirements</u>	35
<u>Breeding Habitat: Leks (March – mid-May)</u>	36
<u>Breeding Habitat: Pre-laying (late March – April)</u>	37
<u>Breeding Habitat: Nesting (mid-April – June)</u>	37
<u>Breeding Habitat: Early Brood-rearing (mid-May – July)</u>	38
<u>Summer – Fall Habitat (July – September)</u>	38
<u>Winter Habitat (October – February)</u>	39
B. Distribution and Abundance	40
<u>Distribution</u>	40
<u>Historic Distribution</u>	40
<u>Areas Added to Historic Map</u>	42
<u>Areas Deleted from Historic Map</u>	43
<u>Uncertain Sage-grouse Species: Added</u>	44
<u>Current Distribution</u>	46
<u>Abundance</u>	50
<u>Lek Counts and Population Estimation</u>	50
<u>Assumptions Made in Sage-grouse Population Estimation from Lek Counts</u>	52
(1) <u>Percent of Leks Counted</u>	52
(2) <u>Interlek Movements</u>	53
(3) <u>Lek Attendance</u>	53
(4) <u>Sex Ratio</u>	54
<u>Alternative Methods of Population Estimation</u>	55
<u>Conclusions</u>	55
<u>Estimated Number of Males in Colorado GrSG Populations</u>	56
<u>Decline of Greater Sage-grouse</u>	57
C. Genetics	60
<u>Summary</u>	63
D. GrSG Habitat Mapping Efforts	66
<u>CCP Habitat Mapping</u>	66
<u>BLM Habitat Mapping</u>	66
E. Individual Populations: Status and Distribution	68
<u>Meeker – White River Population</u>	68
<u>General Description</u>	68
<u>Population Information</u>	68
<u>Historic Information</u>	68
<u>Local Conservation Plan</u>	68
<u>Completed Conservation and Habitat Actions</u>	68
<u>Easements</u>	69
<u>Middle Park Population</u>	71
<u>General Description</u>	71
<u>Population Information</u>	73

<u>Historic Information</u>	74
<u>Local Conservation Plan</u>	74
<u>Completed Conservation Habitat Actions</u>	74
<u>Easements</u>	76
North Park Population	77
<u>General Description</u>	77
<u>Population Information</u>	79
<u>Historic Information</u>	79
<u>Local Conservation Plan</u>	80
<u>Completed Conservation and Habitat Actions</u>	80
<u>Easements</u>	82
Northern Eagle – Southern Routt Counties Population	83
<u>General Description</u>	83
<u>Population Information</u>	84
<u>Historic Information</u>	85
<u>Local Conservation Plan</u>	85
<u>Completed Conservation and Habitat Actions</u>	86
<u>Easements</u>	86
Northwest Colorado Population	87
<u>General Description</u>	87
<u>Population Information</u>	89
<u>Historic Information</u>	90
<u>Local Conservation Plan</u>	90
<u>Completed Conservation and Habitat Actions</u>	91
<u>Easements</u>	92
Parachute – Piceance - Roan Population	93
<u>General Description</u>	93
<u>Population Information</u>	96
<u>Historic Information</u>	97
<u>Local Conservation Plan</u>	97
<u>Completed Conservation and Habitat Actions</u>	98
<u>Easements</u>	98
IV. ISSUES POTENTIALLY AFFECTING GrSG	99
<u>Agricultural Conversion</u>	99
<u>Disease and Parasites</u>	103
<u>Bacterial Diseases</u>	103
<u>Avian Cholera</u>	103
<u>Avian Tuberculosis</u>	103
<u>Salmonellosis</u>	103
<u>Chlamydiosis</u>	104
<u>Mycoplasmosis</u>	104
<u>Tularemia</u>	104
<u>Fungal Diseases</u>	104
<u>Aspergillosis</u>	104
<u>Viral Diseases</u>	105
<u>West Nile Virus</u>	105

<i>Avian Pox</i>	106
<i>Newcastle Disease</i>	106
<i>Avian Influenza</i>	106
<u><i>Parasitic Diseases</i></u>	107
<i>Hemosporidiosis (Avian Malaria)</i>	107
<i>Intestinal Coccidiosis</i>	107
<i>Tracheal Worms</i>	107
<i>Gizzard Worms</i>	107
<i>Cestodes</i>	108
<u><i>Ectoparasites</i></u>	108
<u><i>Conclusions</i></u>	108
<u>Energy and Mineral Development</u>	109
<u><i>Introduction</i></u>	109
<u><i>Evidence of Energy and Mineral Development Impacts to GrSG & GrSG Habitat</i></u> .	117
(1) <i>Direct Disturbance, Displacement, or Mortality of Grouse</i>	117
(2) <i>Direct Habitat Loss</i>	119
(3) <i>Increase in Predation Pressure</i>	120
(4) <i>Increase in Invasive Plant Species and Habitat Quality Decline</i>	120
(5) <i>Cumulative Landscape-level Impacts on GrSG</i>	121
<u><i>Oil, Natural Gas, and Coal Bed Methane Development</i></u>	122
<u><i>Oil Shale</i></u>	125
<u><i>Mining</i></u>	125
<u><i>Wind Energy Development</i></u>	128

<i>Summary</i>	207
V. ANALYSIS	210
A. Population Viability Analysis	210
<u>Concepts and Principles</u>	210
<u>Current Model</u>	211
<i>Baseline Parameters and Simulations</i>	212
<i>Baseline Model Validation through Retrospective Population Analysis</i>	213
<i>Baseline Model Results</i>	215
<i>Sensitivity Analysis</i>	217
<i>Risk Analysis: Impacts of Human Activity on GrSG Population Dynamics</i>	217
<i>Housing Development and Surface Mining</i>	217
<i>Harvest</i>	220
<i>Oil and Natural Gas Development</i>	223
<i>Reproductive Success Mitigation</i>	227
<i>Conclusions</i>	232
B. Population Augmentation	235
<u>Translocation</u>	235
<u>Captive Breeding</u>	235
<i>Sage-grouse</i>	236
<i>Other Prairie Grouse</i>	237
<i>Summary</i>	238
<u>Potential Approaches for GrSG</u>	239
(1) <i>Transplant Eggs to Populations in Need</i>	239
(2) <i>Incubate Eggs in Captivity to Reduce Depredation Losses</i>	239
(3) <i>Supplement Wild-reared Broods with Captive-produced Young</i>	239
(4) <i>Raise Grouse in Captivity and Release to Populations in Need</i>	240
(5) <i>Maintain a Captive Flock as a Genetic Diversity Bank</i>	240
C. Habitat Model Analysis: GrSG Population Size and Available Habitat	241
<u>Model Development</u>	241
<u>Model Selection</u>	243

ACKNOWLEDGEMENTS

Many people, agencies, and organizations have contributed to the development of this conservation plan. Special thanks go to the local work group members who served as advisory members to the steering committee: Carl Herold, John Kossler, Mike Lopez, John Rich, and Jean Stetson. Their advice, diligence, good humor, and endurance were invaluable in the process.

Michelle Cowardin and Karin Eichhoff contributed significantly to the plan, with their meticulous work on maps and GIS analyses. John Toolen's and Mike Grode's assistance with funding and project support during plan development was much appreciated. Dr. Ann Hild, Dr. Sara Oyler-McCance, and Dr. Mike Phillips, provided their considerable expertise to the assessment, issues, and/or analysis sections. Dr. Tom Remington, Tom Thompson, and Al Pfister, also made contributions to portions of the issues and/or analysis sections. Dr. Phil Miller and the Conservation Breeding Specialist Group worked diligently to lead development and refinement of the PVA. Dr. Brett Walker reviewed carefully and commented thoughtfully on the plan. Finally, thanks to the many stakeholders, both from the public and from various agencies, who reviewed and commented on the plan.
