

## Northwestern Basin and Range Section

This area is characterized by north–south trending mountain ranges and volcanic plateaus interspersed with broad, nearly level basins and valleys. The elevational range is 1200–2200 m (4000–7200 ft). Large alluvial fans have developed at the mouths of most canyons, and playas and marshes occur in valleys and basins. Water is scarce except at higher elevations. Few streams are present, and groundwater is a major water source for agricultural and residential uses.

Summers are hot and dry, and winters are cold and dry. Precipitation ranges from 10–79 cm (4–20 in) annually. Precipitation is evenly distributed throughout fall, winter, and spring. Average annual temperature is 5–10°C (41–50°F). The growing season ranges from 30–140 days.

Residential communities are small and sparsely distributed. Livestock production is the primary land use. Mining occurs in some areas.
